- **Modified Booth Algorithm**

  Principle and example

- Book name: Modern Computer Arithmetic, Richard P. Brent and Paul Zimmermann

  pp. 2: **Algorithm 1.1 IntegerAddition**

  pp. 4: **Algorithm 1.2 BasecaseMultiply**

  pp. 27: **Algorithm 1.13 SqrtInt**

  pp. 30: **Algorithm 1.16 EuclidGcd**

  ***** All these algorithms should be read and understood with an example*****

- pptx file name: f31-book-arith-pres-pt3

  pp. 29: **High Radix Multipliers (Basics, possible design of a Radix-4 multiplier, Example)**

- pptx file name: f31-book-arith-pres-pt4

  pp. 7: **Shift/subtract division algorithm (with example)**

  pp. 26-28: **Division by a constant**

  pp. 37-39: **Basics of high radix division**

- pptx file name: f31-book-arith-pres-pt5

  pp. 15-16: **Requirements for arithmetic, basic floating-point algorithms addition (with example)**

  pp. 29-31: **Logarithmic number systems, properties, advantages**

  ***** for further details of these pptx files, textbook reference: Computer arithmetic, second edition by Behrooz Parhami*****

Assignment: (Should be submitted by handwriting)

To be announced later.
