

Chapter 5

Ques 1: Describe the model of image degradation and restoration process5

Ques 2: Describe /What is

- Gaussian Noise
- Salt and Pepper Noise

with proper diagram.....3

Ques 3: Describe /What is

- Arithmetic Mean Filter
- Geometric Mean Filter
- Harmonic Mean Filter
- Contra harmonic Mean Filter

With proper equation.....3

Ques 4: Briefly Discuss noise removing techniques in computer vision (Geeks for geeks)
.....5

Chapter 9

Ques 1: Describe Morphological Operations.....2

Ques 2: What is Structuring Element2

Ques 3: What is erosion/ Explain the equation of Erosion.....5

Ques 4: What is Dilation/Explain the equation of Dilation.....5

Ques 6: Describe the process of Opening and Closing / Explain why it is important in
Image Processing.....6

Chapter 10

Ques 1: Define image Segmentation and Why Segmentation is used in Image Processing?.....4

Ques 2: Design four types of kernels that is used to detect four variations of lines from an image and explain the whole process.....6

Ques 3: What is Thresholding.....1

Ques 5: Elaborate the importance of noise in image thresholding.....5

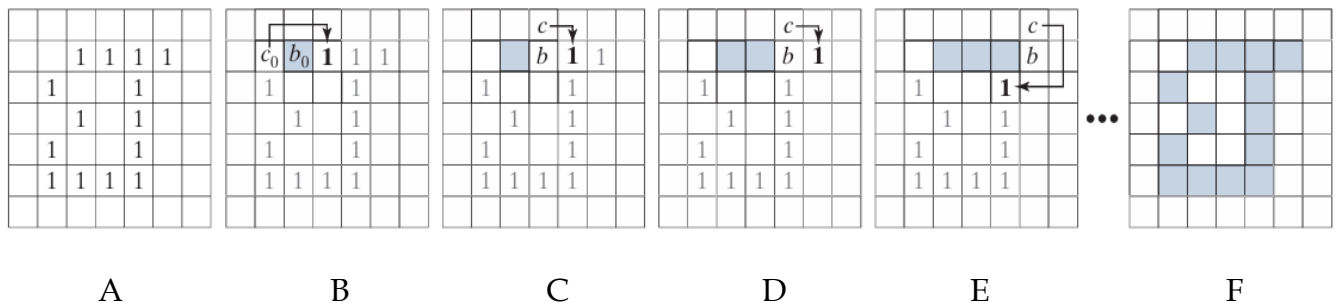

Ques 6: Explain Region Growing.....2

Ques 6: Let $f(x,y)$ denote an input image; $S(x,y)$ denote a seed array containing 1's at the locations of seed points and 0's elsewhere; and Q denote a predicate to be applied at each location (x,y) . Arrays f and S are assumed to be of the same size. Now Illustrates a basic region growing algorithm based on the given scenario.....5

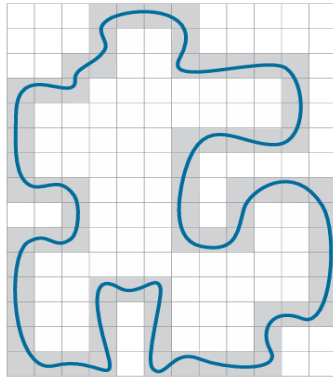

Chapter 11

Ques 1: Explain Boundary Preprocessing.....2

Ques 2:

These are the first few steps in the boundary following algorithm. Now Trace the boundary of a 1 valued region R in a binary image.....6

Ques 3: Explain The MPP Algorithm for the given figure.....5

Ques 4: What is Texture.....3
